DETAILED ACTION

Reasons for Allowance

1. The following is a statement of reasons for the indication of allowable subject matter:

Claim 1 is allowable over the prior art of record, because the prior art of record does not disclose "a control circuit, responsive to said voltage indication signal, that generates a control signal; and a switching element having a control terminal that receives said control signal; said control signal being different for different first and second values of said supply voltage, so sensed, wherein said first value of said supply voltage, so sensed, is different from said desired output voltage, and said control signal is in the form of a pulse train for switching said switching element for said first value of said supply voltage, so sensed, wherein said pulsed control signal has a duty cycle greater than 0% and less than 100%".

Claims 12-13, 19 are allowable over the prior art of record, because the prior art of record does not disclose "at least one DC-DC conversion circuit, connected to said one input node and to an output node, for converting said single supply voltage, so sensed, to a different desired output voltage when said single supply voltage sensed at the one input node is not the desired output voltage and providing said different voltage on said output node; and a control circuit, coupled to said voltage sensing circuit and to said DC-DC conversion circuit for controlling said DC-DC conversion circuit depending on said supply voltage, so sensed, wherein when the sensed single supply voltage is the desired output voltage, said control circuit controls the DC-DC conversion circuit to

not convert the sensed single supply voltage to a different voltage so that said sensed single supply voltage is provided on said output node".
